## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1 and 4-10 are allowed.
2. The following is an examiner's statement of reasons for allowance: the prior art of record taken alone or in combination fails to teach or suggest the first electrode member has electron beam passage holes for passing of the electron beams, and the projecting portion is formed such that when a maximum diametrical dimension of each electron beam passage hole in a horizontal direction including a center axis of the electron beam passage hole is set at 100%, the projecting portion is formed in a region other than a region corresponding to 50% of the maximum diametrical dimension, with the center of this 50% dimension being set at the center axis of the electron beam passage hole, and the projecting portion is formed in a region other than a region where a magnetic field generated from the velocity modulation coils acts on the electron beams in order to suppress velocity modulation effect, without increasing a magnetic field of a velocity modulation coil and further provide an image with high sharpness while preventing a decrease in the precision of the dimension of an electrode of an electron gun assembly.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
